

Erik Ugarte

Description

An ambitious and competitive person who always strives to surpass his own expectations and who is not afraid of new challenges. Has a great feeling for design and user experience and is very comfortable in large teams. Has strong skills as a front-end developer. Is also an educated and active basketball coach at a high level with experience from Superettan (Sweden men's second league) SBL Dam (Sweden's women's top league) and youth national teams.

Experience

Dewire, Knightec - Stockholm, Sweden Consultant

2022 mar – 2026 sep

Developed and contributed to several projects using AWS Cloud, significantly expanding my technical and software engineering skills. During my time at Dewire, I worked on projects and development processes for major customers including Boule, Telia, and Scania, gaining experience in both technical delivery and working within larger development teams.

My primary role was frontend development, particularly for Boule, where I worked extensively with React and modern web technologies. Over time, I developed a broader understanding of the entire software development lifecycle and gained hands-on experience beyond frontend development.

My experience includes:

- Architecture – Designing scalable, maintainable applications and structures.
- Version Control – Git, branching, pull requests and code reviews.
- CI/CD & Pipelines – Automated testing, building, and deployment.
- Cloud Infrastructure – AWS, hosting, storage, databases, auth, and cloud.
- Observability – Logging, monitoring, metrics and error handling.
- Backend & APIs – API integration, data management and REST.

My time at Dewire has allowed me to move beyond focusing solely on writing frontend code and develop a stronger understanding of how different parts of a modern software system work together, from architecture and development to deployment, monitoring, and continuous improvement.

SolidSport - Stockholm, Sweden Developer

2021 feb – 2022 mar

Contributed to the complete rewrite of the SolidSport platform, migrating the frontend from Ruby to TypeScript and React. The project involved modernising a large-scale sports streaming platform used to broadcast games and events, with a strong focus on improving the user experience, maintainability, and overall technical foundation.

My work included frontend development in React and TypeScript, developing reusable components, integrating APIs, and collaborating within a larger development team to gradually migrate and modernise the existing platform.

Education and courses

KTH – Engineering and Teaching
(programming, maths, teaching)
Campus Stockholm 2016-2019

Mobile app developer STI 2019-2021

Flutter course STI 2024-2025

Expertise

Front-end (React, React Native)

Webb development

Mobile app development

TypeScript

Javascript

Flutter (Dart)

Java

Swift

Python

Tools

Git

Xcode

AWS

Cloudflare

VS Code

Languages

Swedish
